During a telephonic interview with Applicant's representative, Mr. Bruce Grant, on 17 July 2007, Mr. Grant stated that the cited prior art, Doranz *et al.* (1997), Moosmann *et al.* (1996), Moir *et al.* (1996), do not provide the suggestion or motivation for splitting the two complementary fragments of a reporter gene in two different cell types, which is a limitation in the instant claims, and do not provide the expectation of success that the two complementary reporter gene fragments in two different cells would combine to form a functional reporter molecule upon cell fusion. Further, Mr. Grant stated that the prior art do not suggest pairing the specific cells, 293T with HeLa, in the claimed invention.

The following is an examiner's statement of reasons for allowance:

(1) The rejection of claims 33-51 under 35 U. S. C. §103 is withdrawn in view of Applicants' arguments.

(2) Claims 33-51 are free of prior art of record. The Examiner is not aware of any suggestion in the prior art of record that would point the artisan to the claimed two-cell assay system with a fragment of a reporter fragment in each cell. The closest prior art is by Moosmann *et al.* (1996), who teach α -complementation of the LacZ gene by co-expressing two separate fragments, alpha and omega, in the same cells, which restores fully the activity of beta-galactosidase. However, Moosmann *et al.* do not teach or fairly suggest expressing the alpha and omega fragments separately in two cell types.

Accordingly, claims 33-51 are allowed.
